INFORMAL EXAMINER'S AMENDMENT

An informal examiner's amendment to the record appears below to correct an obvious typographical error in claim 2. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

In claim 2, line 6, "side" has been changed to --said--. See attached amended claim 2.

Allowable Subject Matter

Claims 2-21 are allowed.

The following is an examiner's statement of reasons for allowance: The cited prior art fails to teach or suggest an optical scanning device including (1) a support frame having the structure and arrangement in combination with the remaining features recited in claim 2; (2) the turbulence prevention means for preventing generation of turbulence air flows due to rotation of the polygon mirror below the base board in combination with the remaining features recited in claim 8 (note that the turbulence prevention means has been interpreted in accordance with 35 U.S.C. 112, sixth paragraph); and (3) the arrangements of the frame mount and the base board in combination with the remaining features recited in claim 14.

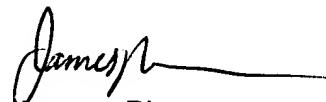

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to James Phan whose telephone number is (571) 272-2317. The examiner can normally be reached on Monday-Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Drew Dunn can be reached on (571) 272-2312. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Examiner's Amendment

8/18/05

2. (currently amended) An optical scanning device as defined in claim 1, device for scanning a subject medium with a scanning beam that is oscillated by a polygon mirror driven by an electric motor, said optical scanning device comprising:

a polygon mirror;

J.P. a base board for fixedly placing ^{said} side polygon mirror
thereon; and

mounting means for mounting said polygon mirror thereon
through said base board so as to place an axis of rotation of
said polygon mirror directed vertically;

wherein said mounting means is configured so as to
prevent a current of air generated due to rotation of said
polygon mirror from penetrating into below said base board;

wherein said mounting means comprises a support frame
which is configured in conformity with said base board so as to
support said base board from the back in a condition where said
support frame is nearly in contact with a strip-like periphery of
the base board.
